INTRODUCTION

A 3D Printed LEGO Technic Compatible mount for a 2AA Battery Holder. This is used in the [Bit Board Rover Kit](#). We are sharing the file in case you want to print your own.

TOOLS:

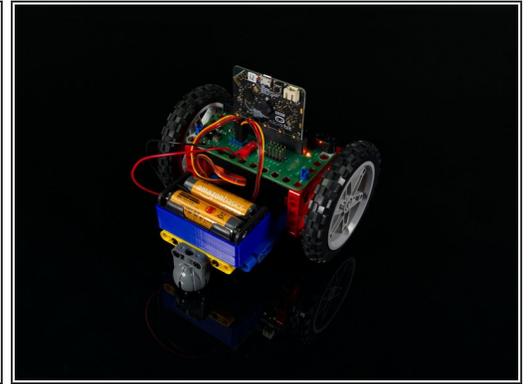

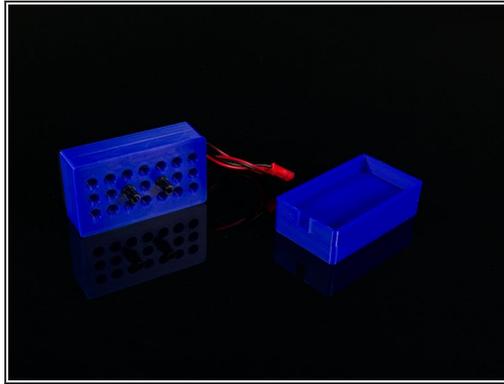

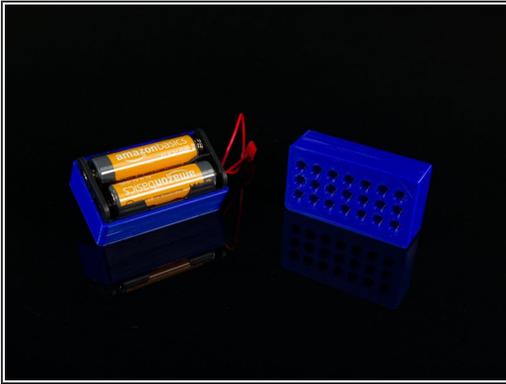

- [3D Printer](#) (1)
-

Step 1 — Download and Print

- You can download the file and print it on your own 3D Printer.
- Find it in our GitHub repository: <https://github.com/BrownDogGadgets/3D-Pr...>
- We have two versions, a short one and a tall one. The short one will print faster and use less material, and the tall one is better at hiding the battery pack if desired.

Step 2 — Tips & Tricks

- The battery pack sits inside the holder loosely. If you want a more secure fit you can add some tape to hold the battery pack in place.

⚠ Every 3D printer is a little different! If your part doesn't fit properly here are a few things to try.

- Part too tight? Try sanding it or cutting away some material with a knife.
- Part too loose? Add some tape to act as a shim.
- You can also try printing it at slightly more or less than 100% scale.
